

# Data 607 Assignment 9 – Web APIs

Leslie Tavaréz

2024-11-01

In this assignment, I will use The New York Times APIs, which provide a variety of data. First, I will sign up for an API key. Then, I'll choose one API to work with and create an interface in R to fetch and read the JSON data from it. Finally, I will convert this data into an R DataFrame, making it easier to analyze and manipulate. This will help me learn how to work with web APIs and handle data in R.

```
library(httr)
library(jsonlite)
library(dplyr)
```

## API Connection

```
##
## Attaching package: 'dplyr'

## The following objects are masked from 'package:stats':
##
##   filter, lag

## The following objects are masked from 'package:base':
##
##   intersect, setdiff, setequal, union

# API Key
apikey <- "IsXIATHpJA6e9jFJJevYb5xrlSfecGDf"

# Construct the URL with the API key as a query parameter
theURL <- paste0("https://api.nytimes.com/svc/topstories/v2/world.json?api-key=", apikey)

# Make the GET request
stories <- GET(theURL)

# Check the status code
print(stories$status_code)

## [1] 200
```

```
summary(stories)
```

## Converting API into DataFrame

```
##           Length Class      Mode
## url           1 -none-    character
## status_code   1 -none-    numeric
## headers       23 insensitive list
## all_headers    1 -none-    list
## cookies        7 data.frame list
## content       77089 -none-    raw
## date           1 POSIXct   numeric
## times          6 -none-    numeric
## request        7 request    list
## handle         1 curl_handle externalptr
```

```
#Parse data
parsed_data <- content(stories, "text", encoding = "UTF-8")
stories_df <- fromJSON(parsed_data)

#Extract relevant parts of the data
articles <- stories_df$results

#Convert to DataFrame
articles_df <- as.data.frame(articles, stringsAsFactors = FALSE)

# Rename the byline column to author
articles_df <- articles_df %>%
  rename(author = byline)

# Remove "By " from the author column
articles_df$author <- gsub("^By ", "", articles_df$author)

# Select and print the title and author columns
selected_columns <- articles_df[, c("title", "author")]
print(selected_columns)
```

```
##                                                                 title
## 1                Iran's Supreme Leader Threatens Israel With 'Crushing Response' to Strikes
## 2                        Israel Says Elite Naval Commandos Abducted Hezbollah Operative

```

In this assignment, I faced challenges when attempting to create a DataFrame before properly parsing the JSON data. Parsing is essential when working with JSON because it converts the structured text into a format that R can easily manipulate. Through this process, I learned the importance of extracting relevant information from the API response and transforming it into a usable DataFrame.
